

Yio Chou (周易佑)

Phone: (+886)927309966 ◦ Email: yiochou1227@gmail.com

Product-driven engineer with 6+ years of experience in backend and full-stack development, including 3+ years of architectural leadership. Proven track record designing scalable systems on cloud infrastructure, driving refactoring initiatives, and mentoring engineering teams to deliver stable, high-quality software.

WORK EXPERIENCE

OneDegree, Senior Backend Engineer

2021/10 - 2025/04

Tech: Python, PostgreSQL, SQLAlchemy, GitLab CI

- Led a team of 4 backend engineers, driving architectural decisions, code quality standards, and mentoring in both technical and career development.
- Led critical system-wide refactoring initiatives including modular redesign, legacy logic elimination, and test coverage expansion, resulting in improved reliability and team velocity.
- Designed and built a flexible rule engine enabling users to define custom rules in Python, while also driving the delivery of key insurance-related features.
- Acted as internal architecture advisor for projects, ensuring consistency with platform evolution and security standards.
- Designed and implemented CI/CD pipelines using GitLab CI, enhancing delivery speed, stability, and rollback safety.
- Proactively developed internal tools to streamline development workflows and reduce friction in day-to-day engineering tasks.

SoundOn, Backend Engineer

2020/07 - 2021/07

Tech: NodeJS, PostgreSQL, GCP, K8S, BigQuery, Dataflow, CircleCI, Firebase, React, Redux

- Developed new features for the podcast hosting platform and player, and refactored legacy code to improve maintainability.
- Deployed and managed backend services on GCP with Kubernetes (GKE), incorporating monitoring, autoscaling, and cost controls. Tuned PostgreSQL query performance and index usage to support high-traffic podcast analytics.
- Orchestrated hourly ETL pipelines using BigQuery and Dataflow to aggregate podcast statistics, enabling timely insights for editorial and growth teams.
- Maintained Firebase services while migrating core systems to PostgreSQL, ensuring data consistency and zero-downtime during migration.
- Collaborated closely with frontend (React/Redux) and mobile app (Flutter) teams to ensure seamless integration and consistent delivery.

LJIT.io, Frontend/Backend Engineer

2018/05 - 2020/02

Tech: NodeJS, Express.js, MongoDB, MySQL, Redis, AWS S3, React/Redux, Webpack, Docker

- Worked in an outsourcing environment, contributing to diverse projects across frontend and backend, leveraging a wide range of technologies.
- Built smart contracts, React/web3 frontends, and scalable backends across blockchain, streaming, and gaming projects.
- Took an active part in study group, and shared topics like SOLID, React/Redux, Database Transaction/Isolation and so on.

EDUCATION

National Central University

2013/09 - 2017/07

Bachelor of Computer Science.

SKILLS

- **Languages:** JavaScript (TypeScript), Python (FastAPI), SQL
- **Database:** MySQL, PostgreSQL, MongoDB, Firestore, Redis
- **Infrastructure:** GCP (GKE, BigQuery, Dataflow, CloudRun), AWS S3, K8s, Terraform

- **CI/CD & Tools:** Git, Docker, CircleCI, Firebase, BullMQ, MailGun, TapPay, OneSignal
- **Frontend:** React, Redux, JQuery, HTML/CSS
