Product-driven engineer with 7+ years of experience building scalable backend systems, leading teams, and delivering impactful features—flexible across frontend and mobile to solve real problems.

WORK EXPERIENCE

Crescendo Lab, Senior Software Engineer 2025/07 - Present

Tech: Python, FastAPI, React, PostgreSQL, Cloud Run, BigQuery, DBT, Terraform

- Owned end-to-end delivery of the company's usage-based credits billing and settlement system, across GTM, Finance, and Product.
- Cut automated top-up from 5.4 days to 3 minutes on a reusable billing platform that meters, prices, and bills any product feature in days, with revenue recognition fully automated.
- Drove a company-wide provisioning platform that lets CSMs activate the correct products straight from HubSpot orders, removing Ops and engineering as onboarding bottlenecks.

OneDegree, Senior Backend Engineer 2021/10 - 2025/04

Tech: Python, PostgreSQL, SQLAlchemy, GitLab CI

- Led a team of 4 backend engineers, overseeing task planning, delegation, and mentoring team members in both technical growth and career development.
- Refactored and modernized core insurance modules to improve product usability, and aligned module design with business domain requirements.
- Designed and built a flexible rule engine enabling users to define custom rules in Python, while also driving the delivery of key insurance-related features.
- Proactively developed internal tools to streamline development workflows and reduce friction in day-to-day engineering tasks.
- Drove legacy code cleanup by aligning with PMs and senior engineers to clarify business logic and improve maintainability.

SoundOn, Backend Engineer 2020/07 - 2021/07

Tech: NodeJS, PostgreSQL, GCP, K8S, BigQuery, Dataflow, CircleCI, Firebase, React, Redux

- Developed new features for the podcast hosting platform and player, and refactored legacy code to improve maintainability.
- Deployed and managed backend services on GCP with Kubernetes (GKE), incorporating monitoring, autoscaling, and cost controls. Tuned PostgreSQL query performance and index usage to support high-traffic podcast analytics.
- Orchestrated hourly ETL pipelines using BigQuery and Dataflow to aggregate podcast statistics, enabling timely insights for editorial and growth teams.
- Migrated database from Firestore (NoSQL) to PostgreSQL with zero downtime, and transformed dirty documents into consistent records.

- Collaborated closely with frontend (React/Redux) and mobile app (Flutter) teams to ensure seamless integration and consistent delivery.

LJIT.io, Frontend/Backend Engineer

2018/05 - 2020/02

Tech: NodeJS, Express.js, MongoDB, MySQL, Redis, AWS S3, React/Redux, Webpack, Docker

- Worked in an outsourcing environment, contributing to diverse projects across frontend and backend, leveraging a wide range of technologies.
- Built smart contracts, React/web3 frontends, and scalable backends across blockchain, streaming, and gaming projects.
- Took an active part in study group, and shared topics like SOLID, React/Redux, Database Transaction/Isolation and so on.

EDUCATION

National Central University

2013/09 - 2017/07

Bachelor of Computer Science.

SKILLS

- **Languages:** JavaScript (TypeScript), Python
- **Database:** MySQL, PostgreSQL, MongoDB, Firestore, Redis
- **Infrastructure:** GCP (GKE, BigQuery, Dataflow, CloudRun), Terraform, AWS S3, K8s, Supabase, Railway
- **Data:** BigQuery, DBT
- **CI/CD & Tools:** Git, Docker, Terraform, CircleCI, GitLab CI, Claude Code, Firebase, BullMQ, MailGun, TapPay, OneSignal
- **Frontend:** React, Redux, JQuery
